What's New in the AutoCAD?

Paper Flow: Create and update paper patterns with fewer clicks. Add, edit, and remove components from patterns, then instantly produce new paper patterns with the click of a button. Clip Paths: Create consistent, scalable object instances across files. Now, you can accurately define the objects and fill them, regardless of where they're located. (video: 1:54 min.) In addition to these new features, AutoCAD 2023 includes enhancements that are recommended for existing users, including better PDF and SVG export, a complete guide to editing in the ribbon, AutoLISP, and more. Supporting Key Features: Add PDF and SVG Export: Export paper patterns and other representations of objects in PDF or SVG file format. Use these files to accurately generate patterns and autocad objects in AutoCAD. (video: 1:55 min.) Complete PDF & SVG Guide: Create, fill, and edit PDF and SVG files. The PDF and SVG Guide simplifies how you produce quality results from your paper patterns and other file formats. (video: 1:13 min.) Continuous Guides for Excel, PowerPoint, and Word: Use the continuous display of guides to align and more precisely create graphics in Microsoft Office. Easily align two objects to grid points on top of one another. (video: 1:43 min.) Additional PDF & SVG Export Enhancements: New options to export formats, including PDF, SVG, and DXF. Export and import PDF and SVG files in a new way with a second window and the Select as command. Exports to PDF are optimized for exporting with no need for additional software. Cross-platform Text Handling: Use the new Text Object tool and Text import and export features to import and export text. Use cross-platform text in your drawings with support for languages such as Arabic, Chinese, Japanese, and more. (video: 2:07 min.) AutoLISP: Use the new AutoLISP command-line tool to create custom command-line scripts for automation. Manage and access command-line scripts and AutoLISP commands from the Command Window, Ribbon, or Add-ins. (video: 1:43 min.) Ribbon: Automatically adjust toolbars and menus to best suit the selection tool or workflow you're using.
