* The most basic tutorial is the Photoshop tutorial on the Missing Manual website (`www.missingmanuals.com`). The tutorial teaches how to open a file, resize it, and make basic changes to the image. * The Photoshop web site (`www.adobe.com`) has lots of useful tutorials and articles as well as information about getting Photoshop, the Photoshop Design Center, and tutorials for downloading free images. PSD Files As we've explained, Photoshop is designed to be an image-editing program rather than a page-layout program. Regardless of the page-layout program you choose, however, you're going to need a Photoshop file to send to the printing company, or send to a web designer. If you're not familiar with what a Photoshop file looks like, a Photoshop file contains layers that can contain images and text. Each layer in the file can be selectively hidden from view in the layer palette. Each layer can also be resized and moved, to give the designer or printer a way to alter the image as needed. Editing a page layout requires a lot of layers to create the page — layers for the graphic images and layers for the text. You also need a Background layer to maintain the organization of the page. Adding text or an object to an image requires a Text or Object layer. You can find a lot of resources on the Web that describe the layers and properties of Photoshop and how to use them. Although Photoshop does have many features that can be manipulated and edited, we're not going to give you a tutorial for using Photoshop's layers and properties. If you don't have a basic understanding of how to manipulate a graphic image in Photoshop, we highly recommend reading a tutorial. The Photoshop tutorial described on the Missing Manual website is a good place to start. Updating a Page Layout to a Photoshop File In Photoshop, the process of converting a page layout into a Photoshop file is relatively painless. You can easily open a file from any of the page-layout programs listed in this chapter and turn it into a Photoshop file. When you have a layout that you want to send to a printing company, you should export it to an EPS or PDF file. We cover both of these file formats in detail in Chapter 12. If you're working on a page that you want to send to a web designer, you can export it to a TIF file, and if you're working on a booklet, you can
