When the printer is restarted, you can test that the firmware settings for the USB connection (see "Returning a Supported USB Device to its Original State") are set to USB 2.0 (and to match the type of cable you have connected to the USB port). Users of the M831x chipset family of products should select the "Device Driver" option rather than the "Supplied OS Device" option. A user may select either, but should use one of the options that is applicable to the platform for which the device driver is being configured. New hardware requires new drivers that are compatible with the operating system you are running. Laptops are no exception. Every time you install a new version of the Windows operating system, you need to install the appropriate driver for the new operating system. This is easy to do. You just plug in the laptop and follow the prompts to either select "Let me pick the right driver" or to install a new driver. This product detection tool installs software on your Microsoft Windows device that allows HP to detect and gather data about your HP and Compaq products to provide quick access to support information and solutions. Technical data is gathered for the products supported by this tool and is used to identify products, provide relevant solutions and automatically update this tool, to improve our products, solutions, services, and your experience as our customer. I also only install the drivers if possible (no applications). I only unpack the Wireless Network Controller and manually install the driver in Device Manager because I want Windows to manage my wireless networks. My goal is to install the least amount of software to keep my boot times quick and my taskbar icons to a minimum. Once you've installed everything, the total number of processes will be under 50 if you can keep the number of processes under 50, you are in GREAT shape.
